

The FM system for active kids

40 years of experience and knowledge

With over 40 years of experience in working with and developing FM systems for schools and over 500,000 FM system installations globally, we have a deep understanding of teachers, children, schools and what parents want. With this knowledge we have developed SolarisFlex, a simple, flexible and practical solution for all teachers and active school children.

**Simple
Flexible
Compatible**

Simple, durable and practical

SolarisFlex is a high quality, and durable FM system for demanding teachers and active children. A light indicator informs the teacher of the system status so they can rest assured the system is working. With the user-friendly multi-channel system teachers and children can easily and quickly change classrooms. The channel and volume lock prevents children from accidentally adjusting the system.

Easier communication and learning

SolarisFlex also stands for flexibility and compatibility. In a classroom with many different hearing systems SolarisFlex works with most hearing aids, CIs and other FM systems. Standard connection sockets means it's easy to use with all multimedia devices available in today's classrooms such as television, computers or MP3 players.

Power

SolarisFlex doesn't drain the hearing aid battery and the use of rechargeable batteries makes SolarisFlex an environment-friendly solution. The charger cord or drop in charger makes it easy to charge the system in the classroom over night, at home or on the move.

Product range:

In the SolarisFlex range there is an extensive portfolio of accesories for both the teacher and student. This includes michophones, headsets, DAI cords and connecting solutions.

neck loop
